**P**LANNING a home is one of life's most interesting and delightful experiences. It is also one of the most serious. You can't cast aside your home as you do a suit of which the style and finish have grown distasteful.

The plan is so very important that you can well afford to consult the best authorities available. If there is an architect at hand, go to him. Tell him your desires and your needs, your possibilities and your limitations. He will prove worthy of his pay.

You can select from this book the designs of doors, windows, door and window trim, stair work and cabinet work, that you favor. You can choose any combination you like, as they are interchangeable.

If you are obliged to plan unaided the outlines of the home-to-be, this book will be doubly helpful. It will not only assist you in choosing the designs of millwork you will use, but will also help to crystallize your ideas of the style and arrangement of your home.

Look through this book. You will find it conveniently arranged. On the left hand page you see the finished house and floor plans. From the picture and plans you can determine whether or not the exterior which appeals to your taste permits the number and arrangement of rooms suitable to your needs.

On the right hand page you will find a reproduction of a portion of the interior and an illustration featuring some particular designs of millwork. There, too, is a list of all the millwork required. Each one of the designs in this book has been used long enough to demonstrate its practicability, and yet, not long enough to make it an old story.

Before you do anything about building—if possible before you even decide on a plan—see your lumberman and get his

advice. He has had experience with dozens of houses. Your experience is yet to come.

You will find him glad to co-operate with you in your desire for a Better Built Home. He can do more than tell you that the houses in this book were designed to range in cost from \$800 to \$3000. He can tell you exactly what the materials required for any one of these homes will cost and approximately how much it will cost to build.

A few days is all he will need in which to compile figures. That is the information you want—not the guess of someone entirely unfamiliar with your local conditions. Then, too, you can consult him about the right materials to use—and inspect those he has in stock. He can show you photographs of **CURTIS** millwork. Probably he can show you some of the **CURTIS** products.

He will undoubtedly advise the use of **CURTIS** millwork. If he doesn't say anything about it, ask him to base his estimate on that product.

You can't be too particular about the millwork, the finish, the trim—call it what you will—in your home. It includes doors, windows, stairs, cabinet work, and is really permanent furniture—fully as important as the movable furniture and always more difficult and more expensive to repair or replace.

Assure yourself that your millwork is worthy of your home.

**CURTIS** millwork is not the cheapest you can buy, but it contains full value for the money. To pay more is waste; to pay less is not real economy.

There are many reasons why you should choose **CURTIS** millwork; too many to tell you here, but they are all summed up in this insurance against disappointment:

"The Makers of Curtis Millwork Guarantee  
Complete Satisfaction to its Users.  
We're Not Satisfied Unless You Are"

We know that you are going to plan a Better Built Home. We hope you will permit us to co-operate with your lumber dealer, architect and contractor, in carrying out your plans. You may do this with every assurance that we shall be constantly interested in your home—while it is being built and after it is completed. But, in any event, we wish you success in your planning and pleasure and pride in the result.

Granada  
C-53

**A** SPLENDID five-room bungalow. The size, twenty-five feet six inches by thirty-eight feet six inches, is well adapted to a small lot. By compact arrangement the floor plan provides for two roomy bed rooms, bath room, living room, dining room and kitchen. Notice, also the "open view" effect of the front porch, obtained by the use of cornice brackets in place of the ordinary porch columns. The illustration at the right shows how the bookcase colonnade adds a roomy touch to living room and dining room.

# Better Built Homes

Belle Isle  
C. 58

THE cheery living room, extending along the entire front, is but one of the attractions of this home. The dining room shown in the illustration at the right is another bright spot in interior arrangement.

From the outside this design presents an appearance of genuine home comfort. Although the porch is unusually pleasing as it now stands, an equally fine effect can be gained by the use of panelled square columns running direct to the porch floor.

Merlin  
C-75

THIS design, both exterior and interior, is a refreshing change from ordinary small homes. Its size, forty-three by thirty-one feet, is peculiarly adapted to a wide lot.

A visitor gets an impression of roominess as he looks from the hall through the living and dining rooms. The living room, especially, makes a strong appeal with its comfortable fire place and excellent window arrangement.

The housewife appreciates the pantry between kitchen and dining room where space is provided for a built-in cupboard.

The illustration on the next page shows the well-lighted bed room and bath room.

C-79

**H**ERE is a suggestion for the builder who plans a three-room home. In case the builder wishes more room later on, it would be very easy to make additions to this design.

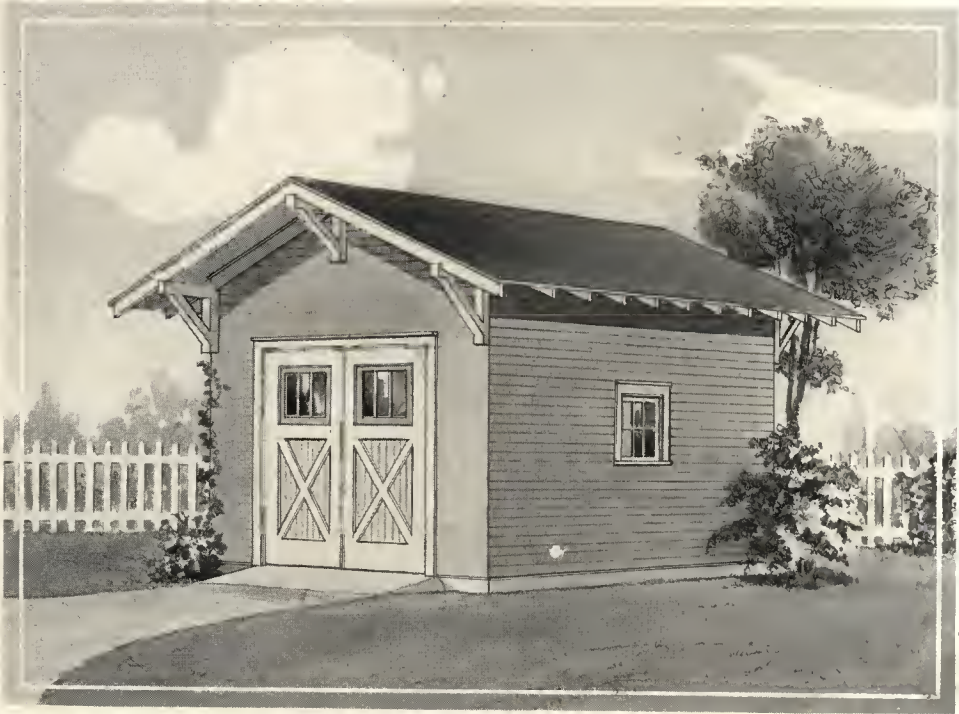

Below is an index of the millwork used in this home. Larger illustrations of most of them may be seen in the Curtis Catalog.

Design	Number
Queen Anne Windows . . . . .	38
Front Door . . . . .	C-24

Doors . . . . . C-792  
 Brackets . . . . . C-1819

**Y**OU spend the best hours of your life *within* the four walls of your home. Nothing more need be said to emphasize the importance of the interior. The doors, windows, stair work and cabinet work add the homelike touch.

Know more about them. They are commonly termed millwork, but that doesn't describe them. They are really permanent furniture, built solidly into the house to be enjoyed and admired every day in the year. Particular care now in selection will prevent disappointment later on.

You will find appropriate designs of CURTIS permanent furniture for every style of building. Since 1866 we have had constantly in mind the thought that our product is being used as a part of the permanent equipment of some home. The result of this experience is passed on to you in this booklet, in the hope that it will help you in planning your Better Built Home.

IN going through this booklet you have undoubtedly been impressed with our sincere desire to help you with your plans. That was our intent. It is the modern spirit of service.

When it comes to the delivery of your material you will find the same sincere interest in actual practice. It is the aim of every Curtis Company to deliver the doors, windows and all the permanent furniture to the job "on time." You may count upon their co-operation to the end that all of the work shall progress smoothly. They will employ every effort to see that you are not troubled with expensive and annoying delays.

We want you to enjoy your building operations, and "on time" service will be a big help.

"Your interests are ours"
